

SCRIPTIFY Documentation

1. Project Overview

This project is a web application developed as a school team assignment using HTML, CSS, and JavaScript. The main goal of the project was to practice teamwork, software development, version control, and application design while creating a functional and user-friendly application.

The project was developed collaboratively by a team of four students using GitHub for version control and project management.

2. Project Objectives

The application demonstrates:

- Team collaboration through GitHub
 - Application logic and data management
 - Front-end web development using HTML, CSS, and JavaScript
 - Project planning and task distribution
 - Software testing and debugging
-

3. Technologies Used

Front-End

- HTML5
- CSS3
- JavaScript

Development Tools

- Visual Studio Code
 - GitHub
-

4. Team Members and Responsibilities

Borislav Andrikov – Project Manager

- Managed the GitHub repository
- Organized team tasks
- Coordinated project development
- Participated as one of the main developers

Vasilin Gospodinov – Code Developer

- Worked on the application structure
- Developed program features
- Improved the user interface

Sofiya Chapkina – Documentation, Presentation and Testing

- Wrote project documentation
- Created the project presentation
- Assisted with testing

Mihail Hristov – Testing and Bug Fixing

- Tested the application
 - Identified issues and errors
 - Fixed bugs and improved application stability
-

5. Development Process

The project was completed using a sprint-based workflow.

Sprint 1 – Planning

Objectives:

- Choose a project idea
- Create the GitHub repository
- Assign team roles and responsibilities

Achievements:

- Finalized project concept
- Established repository structure
- Defined development plan

Sprint 2 – Core Development

Objectives:

- Create the application structure
- Implement core functionality
- Configure the Visual Studio Code project

Achievements:

- Built the foundation of the application
- Set up development environment
- Implemented basic features

Sprint 3 – Features and Logic

Objectives:

- Add functionality
- Improve application logic
- Test user interactions

Achievements:

- Added major application features
- Improved user experience
- Conducted initial testing

Sprint 4 – Finalization

Objectives:

- Fix bugs
- Improve design
- Perform final testing
- Prepare presentation

Achievements:

- Resolved identified issues
 - Enhanced visual design
 - Completed testing process
 - Prepared final project presentation
-

6. Testing

The application was tested throughout development to ensure:

- Correct functionality
- User-friendly interface
- Stable performance
- Error-free interactions

Testing activities included:

- Feature testing
- User interaction testing
- Bug identification
- Bug fixing and verification

7. Conclusion

This project provided valuable experience in teamwork, web development, and project management. Through collaboration and the use of GitHub, the team successfully developed a functional HTML, CSS, and JavaScript application while improving technical and communication skills.

The project achieved its goals and demonstrated effective cooperation, planning, development, testing, and presentation skills.
